

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

CATALOGUE
OF THE
COLLECTION OF DIURNAL
LEPIDOPTERA

Formed by the late

WILLIAM CHAPMAN HEWITSON,

OF OATLANDS, WALTON-ON-THAMES;

AND BEQUEATHED BY HIM TO THE BRITISH MUSEUM.

BY

W. F. KIRBY,

Assistant Naturalist in the Dublin Museum of Science and Art,

UNDER THE DIRECTIONS AND BY THE AUTHORITY OF THE EXECUTORS OF
THE WILL OF MR. HEWITSON.

PRINTED FOR PRIVATE CIRCULATION.

HATTON GARDEN, E.C.

PREFACE.

THE late MR. WILLIAM CHAPMAN HEWITSON bequeathed his Collection of Butterflies to the British Museum on condition that the Collection should be called the "Hewitson Collection," and should be kept in good order, preservation, and condition, and in the same cabinets and in the same order and arrangement, and under the same nomenclature, as they should be at the time of his decease until the expiration of twenty-one years from that time. Mr. Hewitson likewise directed his Executors before delivery over of his Collection to the Museum, to cause a Catalogue to be made, and certain copies to be printed and circulated at the expense of his Estate, among such Public Museums and Lepidopterists as his Executors should see fit.

In accordance with Mr. Hewitson's directions, the Executors employed Mr. Kirby to prepare the Catalogue previous to handing over the Collection to the Trustees of the British Museum, who have accepted the bequest of the Collection on the conditions named in the Will.

The Collection consists of about 4000 species as arranged by himself, and is contained in seven cabinets, comprising altogether 357 drawers of a large and uniform size. As is well known, Mr. Hewitson allowed great latitude for variation, and many Entomologists would probably consider the Collection to contain a far greater number of species.

In the arrangement, determination of species, synonyms, or occasional indications of new species, Mr. Kirby has simply followed the Collection itself; he has added the names of families, the authorities for the specific names,

and such localities as are placed in brackets; in consequence of the specimens in the Collection being imperfectly, or not at all, ticketed with their localities, time would not allow him to determine more than a very few of the unnamed species, but in such cases he has inserted the names in brackets.

The unnamed species are indicated as spaced out in the Collection by Mr. Hewitson; but some of the series of undermentioned *Lycenidae*, *Hesperidae*, &c., obviously include distinct species, which he would, doubtless, have separated when he came to examine them more closely.

It may be added that the Collection is very carefully named, allowance being made for Mr. Hewitson's views on variation; but the locality labels appear to be incorrect in a few instances.

Apart from the very fine condition of all the specimens, and the rarity of many of the species contained in this Collection, its scientific value is greatly increased by the large number of types which it includes, there being among them, in addition to the many hundreds of species described by Mr. Hewitson himself, those of many species described by Messrs. Wallace, Moore, and others.

June 1, 1879.
